GS- Sugar Beet Pulp Pellets

Beet Pulp is the vegetable matter, which remains after sugar is extracted from sliced sugar beets. This vegetable matter is then made into pellets to improve its nutritional value and handling characteristics. It is high in fiber and unique in that its fiber is extremely digestible

Typical Analysis

Crude Protein	9.0%
Crude Fat	0.5-0.6%
Crude Fiber	15.0-20.0%
Ash	4.0-5.0%
Moisture	8.0-12.0%
TDN	74.0%
NEL	0.81 Mcal/lbs.
Calcium	0.6%
Phosphorus	0.1%
Pellets size	9 to 11mm
Free from	molasses

Sugar beet pulp can be exported with variable specifications and pellet sizes as per customers' requests. Egyptian season starts in February and ends in July, but GS can export all year long due to our large storage facilities and warehousing tactics. Having a highly trained logistic team allows us to load 10-20 FCLs on daily basis.
